

Paediatric first aid

Millions of people, including children, are hurt or killed by injuries every year due to inadequate response or lack of timely assistance*.

Prompt and appropriate use of paediatric first aid can considerably reduce serious injuries and improve the chances of survival and recovery of the children at your nursery.

As an early years practitioner, you may often find yourself having to deal with common childhood injuries and situations such as banged heads, wounds and abrasions, choking and febrile convulsions. It is vital that you have the skills, competence and confidence to deal with accidents at your nursery in a timely and appropriate manner.
